Prioritization Overview

After gathering and analyzing the data—including gathering input from individuals whose organizations work with low-income, minority, or other medically underserved populations—Professional Resource Consultants (PRC), Senior Leadership and the Board used a structured process to pinpoint the community's most urgent health needs. This process was meant to be inclusive and data-driven, ensuring that the chosen priorities represented both community members' experiences and health trends. The process involved an online survey with community stakeholders and final selection of top health needs by hospital leaders.

Online Key Informant Survey

- Key informants were invited to participate in an online survey with topics such as major current community needs, gaps in service and perceptions of problem severity.
- Key informants were selected based on community roles and knowledge of area health needs. A selection of approximately 146 were invited to participate and 64 community representatives took part in the survey.
- Key informants were professionals who provide a wide range of services to the community from diverse backgrounds.
- Results from the key informant survey were presented for prioritization.

Selected Health Priorities

PRC presented in-depth survey findings and a summary to Logansport Senior Leaders, Logansport Quality Team members, Parkview Community Benefit Team and Parkview Health Improvement Team. The teams reached a consensus and listed recommendations on health priorities, taking into account hospital resources and overall alignment with the hospital's mission, goals and strategic priorities. These recommendations were submitted to the Logansport Board of Directors prior to the monthly board meeting for consideration and review. On November 24, 2025 the Board approved the following health priorities.

Selected Priorities for Parkview Logansport Hospital
• Access to Health Care Services • Access to Mental Health and Addiction Services • Infant Health and Family Planning
